

Radio Gateway — Link LMR Radios, LTE Radios, IP Radios, IP Phone Systems and More

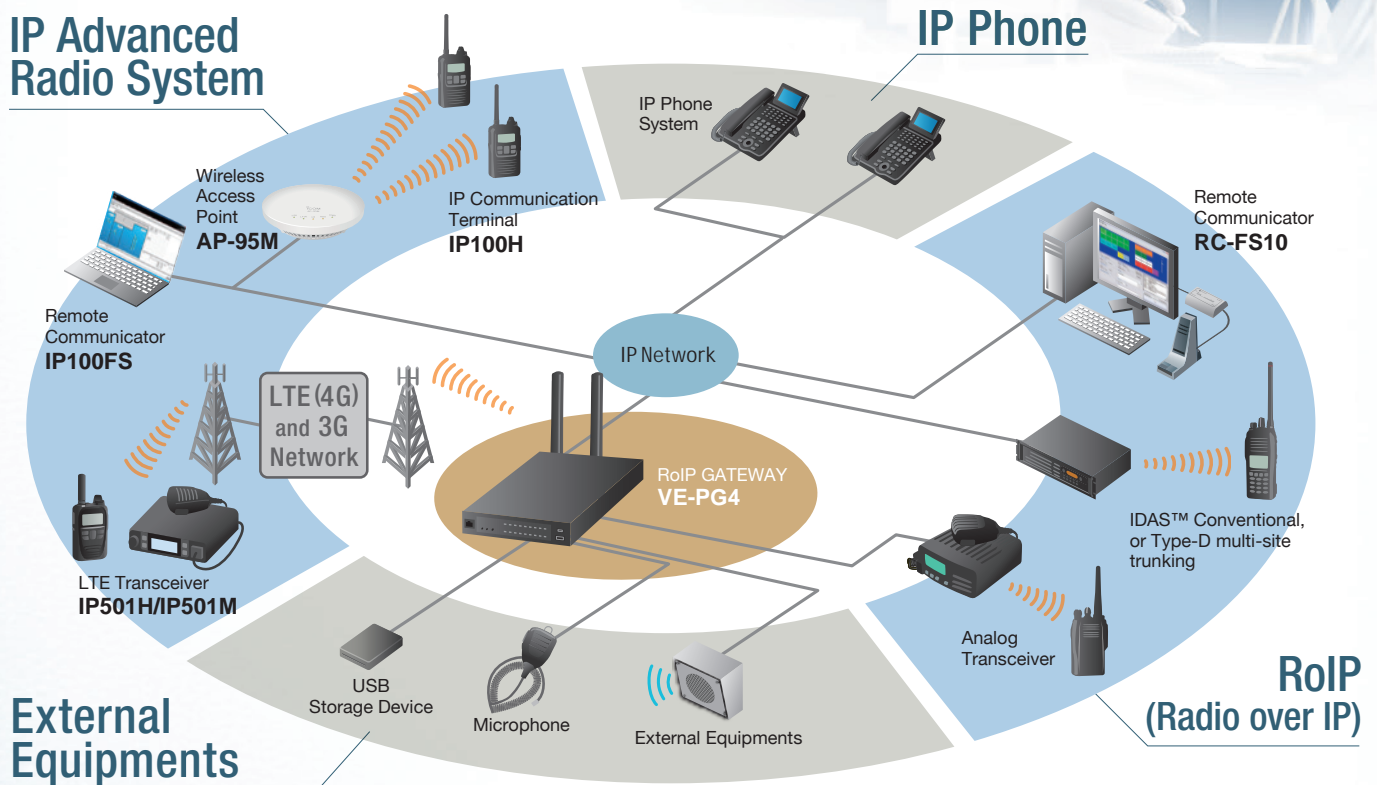

Ensures Cooperative Information Sharing Across Systems and Devices

The VE-PG4 is a versatile RoIP (Radio over IP network) gateway unit, which seamlessly interconnects LMR radios, LTE radios, IP communication terminals, IP phone systems and external devices. In addition to the IP Network (LAN/WAN), the built-in LTE module* provides virtually nationwide communication coverage.

* Service availability depends on the country. Network coverage provided by a custom SIM card.

Communication Links

RoIP GATEWAY
VE-PG4

Features

All in One Package

The VE-PG4 includes built-in RoIP, SIP gateway, IP router, IP PBX and IP communication terminal controller functions, in one box. In comparison with a similar system combining several devices, installation and administration of the integrated VE-PG4 can be simpler, with less conflict of settings.

Call Recording to a USB Drive

Incoming/Outgoing calls can be recorded to an external USB device connected to the VE-PG4. Up to four recording settings are programmable. The recording call type is selectable from All, Group, and Individual calls. In addition, the Monitor function transfers the received audio data to an intended device.

Microphone Connection for Base Operation

Connect HM-241, optional speaker-microphone to the microphone connector on the VE-PG4's front panel to enable simple base operation. Echo canceller and noise canceller functions are built-in for full-duplex communication with IP advanced radio system, like the IP100H, IP501H or IP501M.

Position and Status Information

GPS position and status information from the IP501H/IP501M LTE transceivers can be received and transferred to a PC to track the location of the radio users or a user in a vehicle.

* GPS mapping software is required for GPS data.

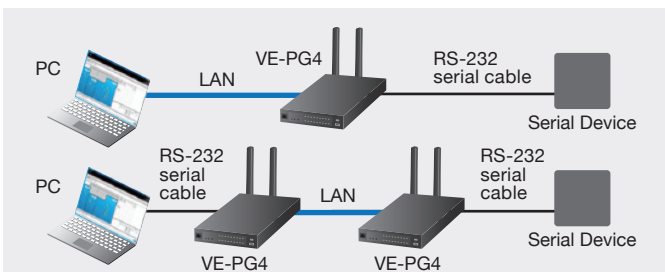

Remote Communicator Software, RC-FS10

The optional RC-FS10 remote communicator creates an IP-based virtual radio on a PC, and can communicate with land mobile radios, LTE radios, and IP communication terminals through the VE-PG4.

Serial Pass-through Function

The Serial Pass-through function enables you to connect a serial device to the VE-PG4 to extend the communication range between the connected device and a controller PC. The virtual serial port software for Windows® PC is supplied with the VE-PG4.

SIP Server and IP-PBX Functions

The built-in simple SIP server enables you to assign IP phone numbers with extension groups. The VE-PG4 can be connected to external SIP server as a client. The following IP-PBX settings are programmable.

- Voice Phonebook
- DID (Direct Inward Dialing)
- Used with Panasonic KX-UT and KX-HDV series IP phones
- Call log
- Extension presence
- Phone number routing
- Outside line regulations
- Caller prioritization
- External call limiting
- SIP conferencing

Router Functions with VPN Tunnel

The VE-PG4 supports LAN, DHCP client, Static IP or PPPoE connections. The VPN function creates a secure IP tunnel connection over the Internet.

Half-width 1U Form Design

The VE-PG4 occupies only half the width of a 19-inch rack. It can be functionally installed with repeaters, switching hubs and other equipment. LTE (4G)/3G antenna bases with 1.5 m (4.9 ft) of cable are supplied in case antennas need to be relocated for better reception.

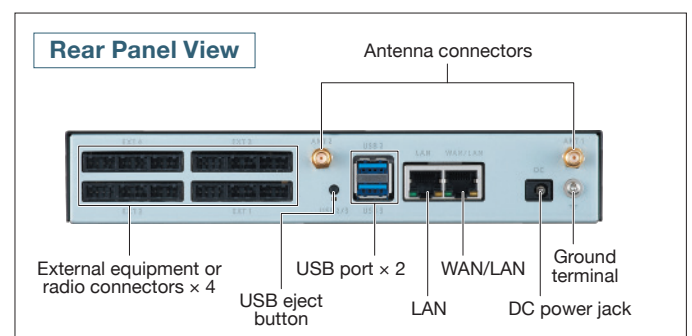

Online Firmware Update

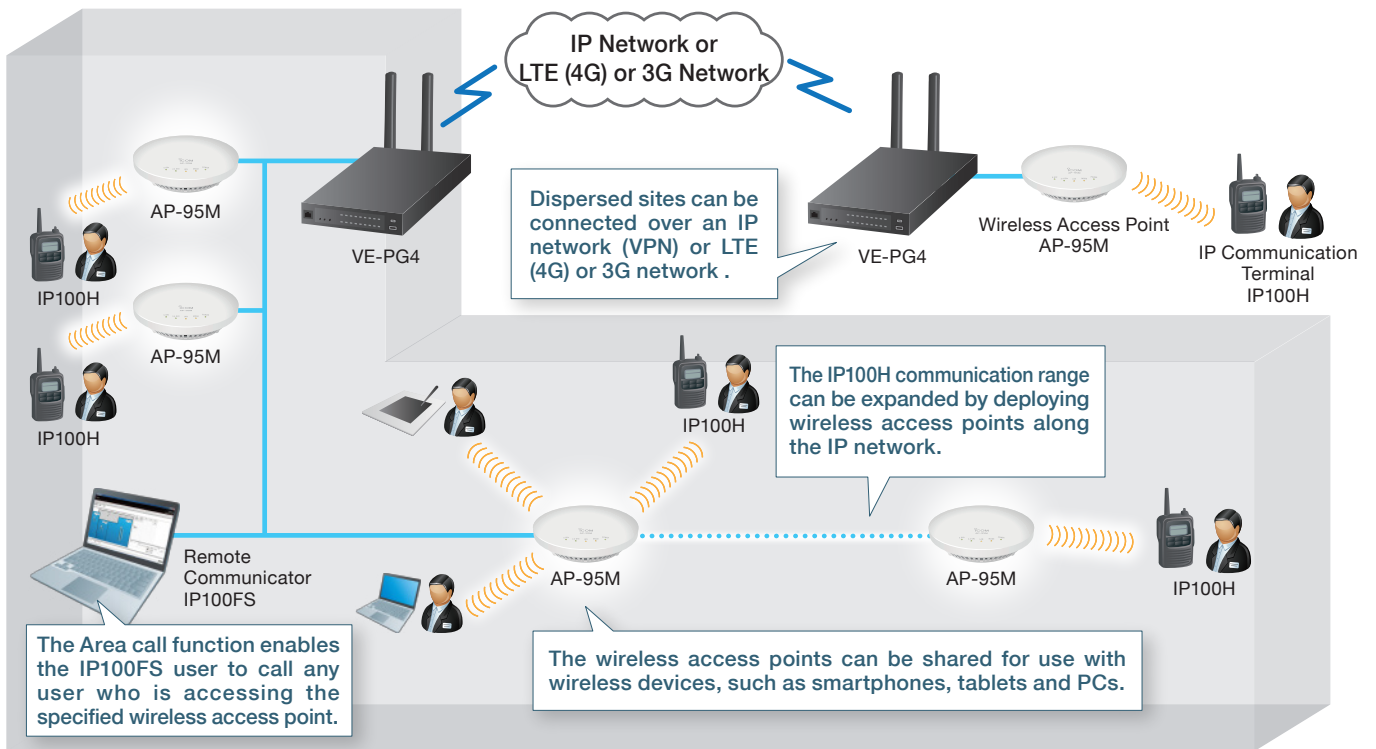

The VE-PG4 supports automatic and online firmware update functions, for remote maintenance. Settings can be saved to a backup file, and easily restored.

Management Features

- SYSLOG and SNMP
- Telnet and SSH
- Ping Test and Traceroute Test
- Abnormal condition monitoring, such as LAN port link-down and SIP server registration error
- Administrator password
- SNTP server
- Security slot

Built-in Controller for the IP100H, IP Communication Terminal (Wireless LAN)

The VE-PG4 has a built-in IP100H IP communication terminal controller function that is capable of controlling up to 50 IP100H IP Communication Terminals, and IP100FS Remote Communicators. The IP100H can send and receive voice and preprogrammed text messages to the other units through the wireless LAN access points. The IP communication terminals are suitable for intra-building communication, which will communicate anywhere your network has Wireless LAN access.

Wireless Communication System

By deploying access points along the existing IP network, the IP advanced radio system can communicate from anywhere in the facility. The IP100H can access the nearest access point, and can roam between access points. No license fee is required, and there are no call charges.

Hands-free, Full-duplex Communication

With an optional earphone-microphone or headset*, the IP100H user can simultaneously talk and receive like a phone call. Hands-free operation allows your staff to carry out other tasks at the same time.

* For full-duplex operation, use either an HM-153LS, HM-166LS, or HS-102 with the OPC-2359, for full-duplex operation.

Individual, Group, All or Area Communication

Staff spread across multiple rooms can communicate seamlessly. The IP communication terminal can receive Short Data Messages with a vibration alert from a PC installed with a IP100FS.

Easy System to Set Up and Use

The VE-PG4 programs almost all terminal configurations over the air. Individual PC programming through a cable connection is not required. (Except initial setup).

IP Communication Terminal IP100H

- License-free wireless LAN communication terminal using IEEE 802.11 a/b/g/n standards (2.4 GHz and 5 GHz)
- WPA-PSK or WPA2-PSK encryption
- IPX7 waterproof (1 m depth of water for 30 minutes)
- MIL-STD 810 G rugged construction
- Compact 58 × 95 × 26.4 mm body and a light 205 g (approximate) weight
- Vibration alert function notifies incoming calls
- Emergency call with higher priority

Remote Communicator IP100FS

(Supplied with USB flash drive for use as a USB hardware key)

- The IP100FS can communicate with IP100H IP communication terminals from a PC
- The IP100FS can obtain location information of each IP100H based on the access point being used
- Can be installed on a Windows® based tablet PC, as well as a laptop PC

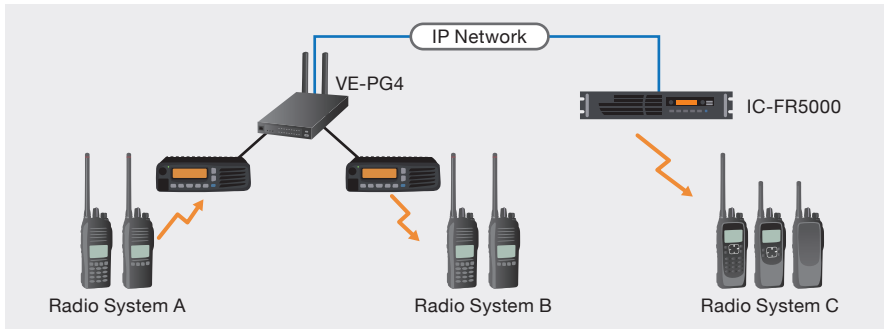

Wireless LAN Access Point AP-95M

- IEEE 802.11ac (Wave 2) standard, high-speed communication
- Beam forming function, MU-MIMO function
- Optional RS-AP3, access point management software

AP-95M

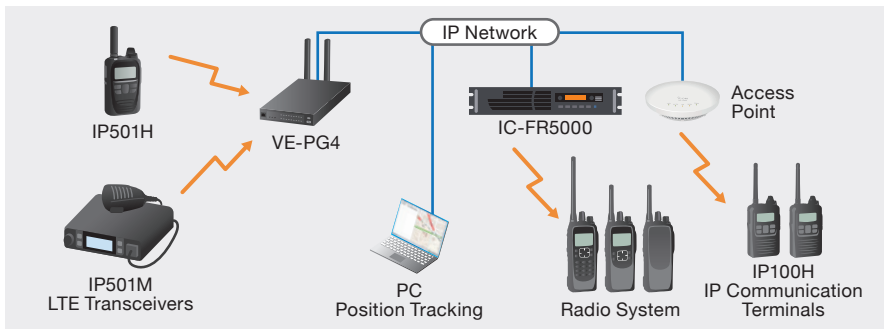

Bridge Connection between Radio Systems

The VE-PG4 interconnects with two or more radio systems, even when the systems are using different bands and different categories. All received audio is bridged to opposing radio system, so a radio user can talk to all connected radio users. The built-in digital voice converter converts analog audio to IDAS™ compatible digital audio.

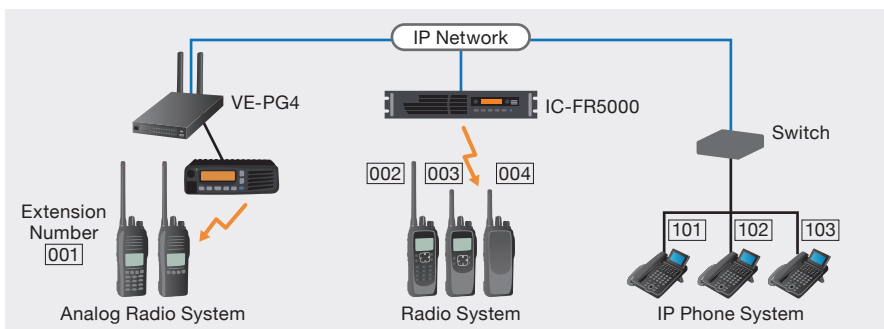

* Cross band/cross category operation may be prohibited in some countries. Please check the legal requirements in your country before installation.

LTE Transceiver Gateway

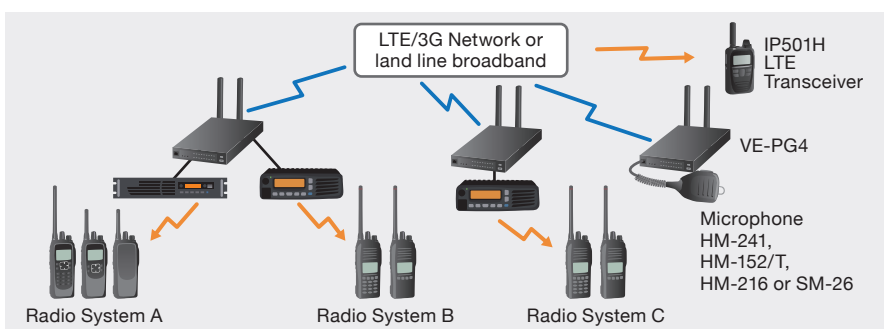

By installing a custom SIM card to the built-in LTE module, the VE-PG4 can interconnect IP501H/IP501M LTE transceivers with conventional radio systems and IP100H IP communication terminals. GPS position information from the LTE transceivers can be received and transferred to a PC.

IP Phone Interconnect

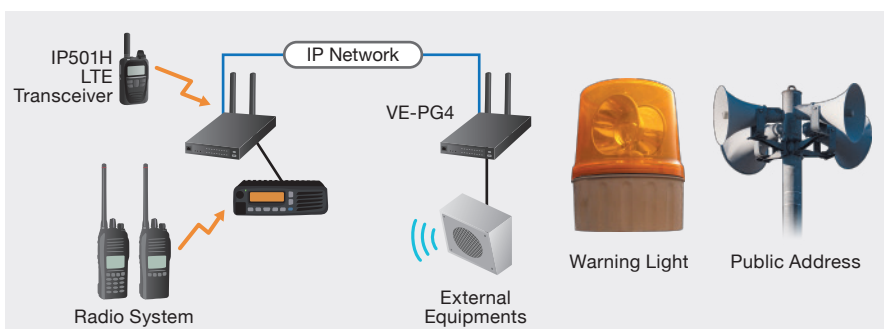

The built-in Simplified SIP server can assign extension numbers to IDAS™ radio terminals, IP advanced radio terminals, and groups of analog radio users as well as IP phones. A radio user can initiate phone calls. Phone users can make individual or group calls to connected radio users.

Multi-site Connection between VE-PG4s

Two or more VE-PG4s can be connected through LAN or LTE (4G) and 3G networks. The communication area can be flexibly expanded, and dispersed radio sites can be connected, regardless of distance or radio system used.

External Equipment Connection

Public address system, siren, warning light and other external devices can be connected to the VE-PG4. When detecting an emergency signal, users can start emergency notification from either a digital transceiver, IP transceiver or public address system.

SPECIFICATIONS

GENERAL		
Power supply	12 V DC $\pm 10\%$, 4 A maximum 100–240 V AC (with the supplied AC adaptor)	
Operating temperature range	0 to +40°C, +32 to +104°F	
Operating humidity	5–95% (At no condensation)	
Dimensions (WxHxD) (Projections are not included)	213 x 36.8 x 270 mm, 8.4 x 1.4 x 10.6 in (Approximate)	
Weight	1.8 kg, 4 lb (Main unit, approximate)	
Regulatory compliance	FCC Part 15 Class B/ ICES003, Part22, Part24, Part27, EN301 489-1, EN301 489-19, EN301 489-52, EN301 908-1, EN301 908-2, EN301 908-13, EN303 413, EN62479, EN62311, EN62368-1	
INTERFACE		
LAN/WAN	RJ-45 type x 1 (Auto MDI/MDI-X) 10BASE-T/100BASE-TX/1000BASE-T *WAN/LAN port selectable.	
LAN	RJ-45 type x 1 (Auto MDI/MDI-X) 10BASE-T/100BASE-TX/1000BASE-T	
USB	Host interface Console interface	
Network*	4G bands: LTE B1, B3, B7, B8, B20 (EUR) LTE B2, B4, B12 (FCC) LTE B1, B3, B5, B7, B8, B28 (AUS) 3G bands: W-CDMA B1, B8 (EUR) W-CDMA B2, B5 (FCC) W-CDMA B1, B5 (AUS)	
External port	Connectors	2.54 mm (0.1 in) pitch quick connector (4 terminals x3) x4
	Audio input	-10 dBs/-40 dBs selectable Input impedance 10 k Ω unbalance
	Audio output	0 dBs/-20 dBs selectable 600 Ω load unbalance/8 Ω 1 W speaker
	Control input	Low voltage contacts (3.3 V DC/ 1 mA)/ Voltage input (3–16 V)
	Control output	No voltage contacts (30 V/ 100 mA)/ Open collector (3–16 V 10 mA)

All stated specifications are subject to change without notice or obligation.
* Service availability depends on the country. Network coverage provided by a custom SIM card.

Supplied Accessories

- Antennas • Antenna bases with 1.5m (4.9 ft) cable
- BC-236, AC adaptor • Quick connectors

COMPATIBLE MODELS

IP Communication Terminal	 IP100H	Wireless LAN connection. (Access Point is required.)
LTE Transceivers	 IP501H  IP501M	LTE (4G) or 3G Network connection.
Satellite PTT	 IC-SAT100	OPC-2412 cable is required.
VHF/UHF Repeaters	 IC-FR5000, IC-FR5100 IC-FR6000, IC-FR6100	Either UC-FR5000 (LAN) or OPC-2390 is required.
VHF/UHF Transceivers	 IC-F5061D, IC-F5062D, IC-F5063D IC-F6061D, IC-F6062D, IC-F6063D	OPC-2275 cable is required.
VHF Marine Transceivers	 IC-M605, IC-M605EURO	OPC-2273 cable is required.
VHF Air Band Transceivers	 IC-A120, IC-A120E	OPC-2275 cable is required.

OPTIONS

Audio Connection Cables

OPC-2390 5m (16.4ft) cable for the IC-FR5000/FR6000 series repeater. D-SUB 25-pin connector.
OPC-2275 5m (16.4ft) cable for a mobile transceiver such as IC-F5060D/F6060D series and IC-A120/E. RJ-45 modular plug connector with speaker plug.
OPC-2273 5m (16.4ft) cable for the IC-M605/EURO VHF marine transceiver. Waterproof 8-pin connector.
OPC-2276 5m (16.4ft) cable for external microphone and speaker, instead of the front panel.
OPC-2389 5m (16.4ft) cable for a serial device with RS-232 connector.

Speaker-Microphone

Microphones

Remote Communicator
